DISCHARGE- SUMMARY

Name of the Patient: Mrs.B.Jayamma

Age: 59 Y/F

Room Type: A.C (Single)

D.O.A:01/02/2018

Address: Pandillapalli(V),
Prakasam(Dt)

D.O.S: 02/02/2018

D.O.D:11/02/2018

Consultant Name: Dr G.Sudhir Bhargav Reddy M.S., M.Ch (Ortho)

SUMMARY

PRINCIPAL DIAGNOSIS: GRADE IV OSTEO ARTHRITIS RIGHT KNEE WITH OSTEOPOROSIS.

HISTORY:

Patient presented with the complaints of

- Pain
- Deformity
- Inability to sit cross legged and squat.

Pain more over medial joint line.

Pain increases on walking rest and decreases on taking rest and medications.

Patient was on symptomatic treatment for all these days and came here for further follow up.

Examination of both knees: Fullness in the suprapatellar region.

Tenderness in the medial joint line

Patellar grinding test positive

Lachmannstest negative

Anterior and posterior drawer test negative

Mc Murray test for menisci negative.

HOSPITAL COURSE:

Patient was admitted in the ward, necessary blood investigations were done, and anaesthetist opinion was taken for surgical fitness. After fitness from the anaesthetist was obtained, patient was taken up for surgery for Right knee on: 02-02-2018.

SURGERY:

TOTAL KNEE REPLACEMENT FOR RIGHT KNEE done on: 02/02/2018.

Procedure:

Under combined spinal and epidural anaesthesia, under tourniquet control parts were prepared and draped sterile.

Through subvastus approach knee joint reached.

Synovium was found to be hypertrophied, Extensive chondral damage was present. Calcific deposits were seen extensively over the menisci, synovium and ACL sites. Tibial and femoral cuts were made, prosthesis of femur and tibia size were measured: Medial and Lateral instability were checked. Prosthesis were inserted using cement and movements checked. Wound washed and closed in layers over negative suction drain.

POST OPERATIVE PERIOD:

Patient recovered well from the surgery hence shifted to S.I.C.U, patient was observed in S.I.C.U. She responded well hence shifted to the wards.

In the ward IV antibiotics, analgesics were given, wound inspection was done on the second postoperative day, and wounds were healthy.

Sterile dressing done drain tip was sent for culture and sensitivity

Patient was made to walk with walker support,
