Discharge/Transfer Date:

Diagnosis this visit:

Trimalleolar fracture of right ankle (S82.851A) 10/02/2018 20:57 Discharge

Consultants

Dr. Gaurav Abbi

Reason for Admission

Fall and ankle pain.

[1]

Hospital Course

For full details of admission please see the H&P of Dr. Patel 10/2/18, briefly, patient is a 36-year-old female with no significant past medical history, who presents to the hospital after a fall today while visiting San Francisco. She states that she tripped and fell at the Maritime Museum. Her husband heard a pop and brought her to the Emergency Room after she was complaining of severe pain. The pain was mostly localized to her right ankle, which was swollen. Upon evaluation in the Emergency Room, she was found to have a trimalleolar fracture, for which she will undergo orthopedic intervention on hospital day 1. Her open reduction and internal fixation of her right trimalleolar fracture was well-tolerated with the minimal blood loss. Patient progressed in her activities with physical and occupational therapy providing teachings on how to maintain a nonweightbearing status to her right lower extremity for the coming 6 weeks. Pain was well controlled with oral medications and patient was discharged to self-care in stable condition on 10/5/18. Patient is to have orthopedic follow-up in 3 weeks for removal of staples and possibly for conversion of plaster cast to a rigid boot.

Procedures and Treatment Provided
DATE OF PROCEDURE: 10/03/2018

PREOPERATIVE DIAGNOSIS: Right trimalleolar ankle fracture.

POSTOPERATIVE DIAGNOSIS: Right trimalleolar ankle fracture.

PROCEDURE PERFORMED: Open reduction and internal fixation of right trimalleolar ankle fracture.

SURGEON: Gaurav Abbi, M.D.

ASSISTANTS: None.

ANESTHESIA: General plus saphenous popliteal block plus local.

ESTIMATED BLOOD LOSS: 25 mL.

TOURNIQUET TIME: 76 minutes at 250 mmHg.

FLUIDS: 1100 mL of crystalloid.

URINE OUTPUT: None.

STATUS: Stable.

Result Date: 10/03/18 16:13
Verified By: Lentz, Daniel MD at 10/05/18 14:44

Report : XR Ankle 2 Views Rt
15 intraoperative fluoroscopic spot images of the right ankle.

Loc: SFHDDIM06

Indication: Intra-op: ORIF Right ankle trimalleolar fracture.

Comparison: X-ray right ankle October 2, 2018.

Findings:

Intraoperative fluoroscopic spot images document open reduction and internal fixation of the fractures of the medial and lateral malleolar. The final images show lateral plate and screw fixation of the distal fibula bridging the fibular fracture and screw fixation of the medial malleolar fracture, with the fracture components in near-anatomic alignment.

The dose summary screen shot from the fluoroscopy unit indicates a total fluoroscopy time of 48.3 seconds and a cumulative radiation dose of 205.68 mrad.

Impression:

Interoperative fluoroscopic spot images demonstrating open reduction and internal fixation of fractures of the right ankle documenting the use of intraoperative fluoroscopy. 10/05/18 14:44

Report : XR Ankle 3+ Views Rt

XR Ankle 3+ Views Rt

Location: SFHDDIM08

Clinical History: pain

Comparison: None.

Technique: 3 views right ankle.

Findings:

There is an acute avulsion fracture of the medial malleolus with 3.5 mm of distraction and 12 mm of lateral displacement. There is an acute oblique fracture of the fibula distal metadiaphysis with 5.5 mm of posterior displacement and 6 mm of lateral displacement. There is an acute fracture of the posterior malleolus with less than 2 mm of posterior displacement. There is marked widening of the medial clear space. No significant degenerative disease of the hindfoot or imaged midfoot. Bone mineralization is unremarkable. There is marked soft tissue edema.

Impression:

Acute trimalleolar fractures, as detailed above. 10/02/18 16:46

Condition on Discharge

Stable

Pending Studies

none

Discharge Plan

Discharge Medications

1. acetaminophen-oxyCODONE(Percocet-5/325 oral tablet) 1 - 2 Tab By mouth Tab every 4 hours as needed for Pain Moderate to Severe (4-10) 5 Day Special Instructions: not to exceed 12 tablets/day
2. docusate(docusate sodium 100 mg oral tablet) 100 mg= 1 Tab By mouth once daily 7 Day Special Instructions: with

plenty of water. May take additional dose as needed for constipation.

3. acetaminophen(Tylenol 325 mg oral capsule) 650 mg By mouth Cap every 4 hours as needed for Pain Mild (1-3)

14 Day

Discontinued Meds

Discharge Disposition

Discharge

Order Details: 10/04/18 8:15:00 PDT, Today, Home or self care

Discharge Diet

Discharge Diet

Order Details: 10/04/18 8:15:00 PDT, Regular diet

Discharge Activity

Discharge Activity

Order Details: 10/04/18 8:15:00 PDT, As tolerated

Discharge Follow-up Instructions

Follow-Up Details:

Provider/Org Name: follow up with an orthopedic surgeon

Within: 2 to 3 weeks

Provider/Org Name: Follow up with primary care provider

Within: As scheduled

Discharge time greater than 30 minutes. Face-to-face encounter on date of discharge.
